

Globe 4200Tx (DDS)

The alarm system is designed to serve the Toyota vehicles, communicates directly with the vehicle ECU using the original vehicle communication protocol (DDS/RDA).

The Globe 4200 system is operated by the Toyota original high security remote control. In case the vehicle is not equipped with the original Toyota remote, the Globe 4100Tx alarm system is capable to work with its own radio control.

The protection of your vehicle is assured by interior movement as well as perimetric sensors.

Key Points: The system integrates the COBRA BUS, which allows interface with several Cobra modules like immobilizer, sensors or satellite tracking system.
